

Leofric

The Fairford

The Fairford garage, workshop or storage room has many features that set it apart from the rest.

The unique one-piece side to side uPVC roof means there are no ridges or caps and has an anti-condensation coating to the underside. The 7ft high steel reinforced concrete panels combined with the low pitch Apex means that extra height and capacity is achievable while still coming under planning restriction height. The standard finish is a genuine Cotswold rounded stone quarried about ten miles from our factory. Other finishes are available at an extra cost.

The Fairford is a maintenance-free building.

All external features like fascia, boards & rainwater goods are uPVC.
